# Introduction

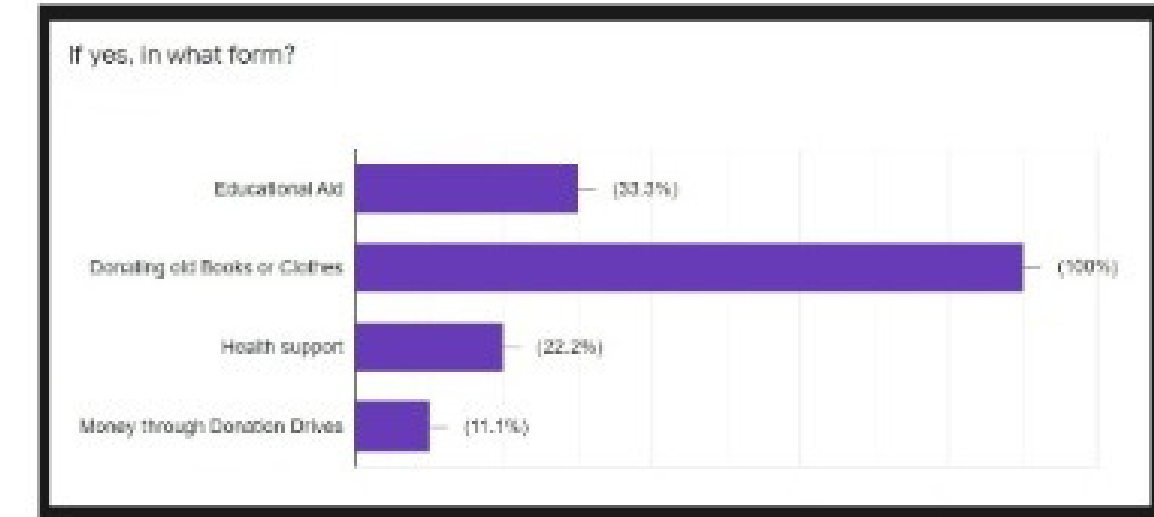

Hello everyone!

The Objective of today's presentation is to plan and perform an analysis of the data gathered for our Final Project that is influenced by the goals identified at the outset and the data actually gathered.

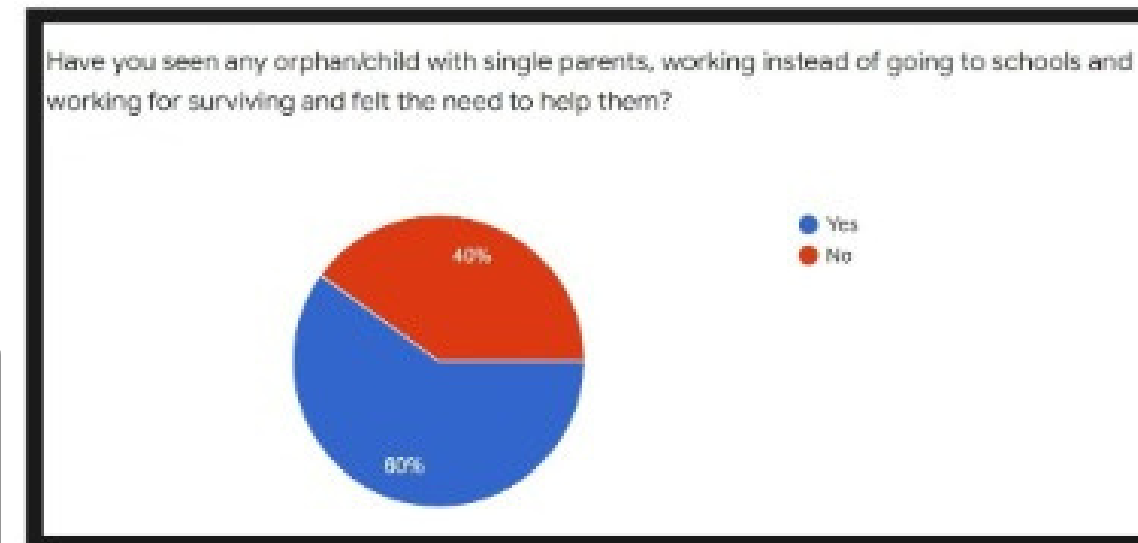

# Quantitative Analysis

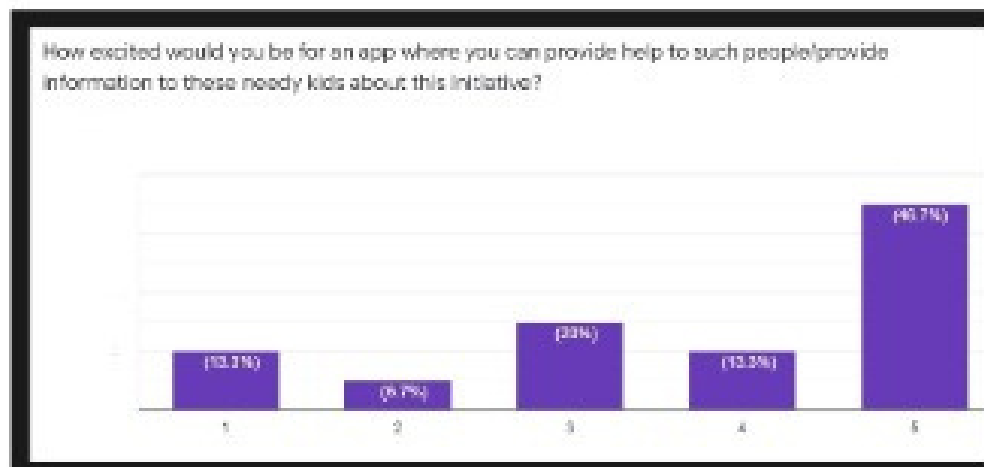

**Have you ever helped or donated to any charity**

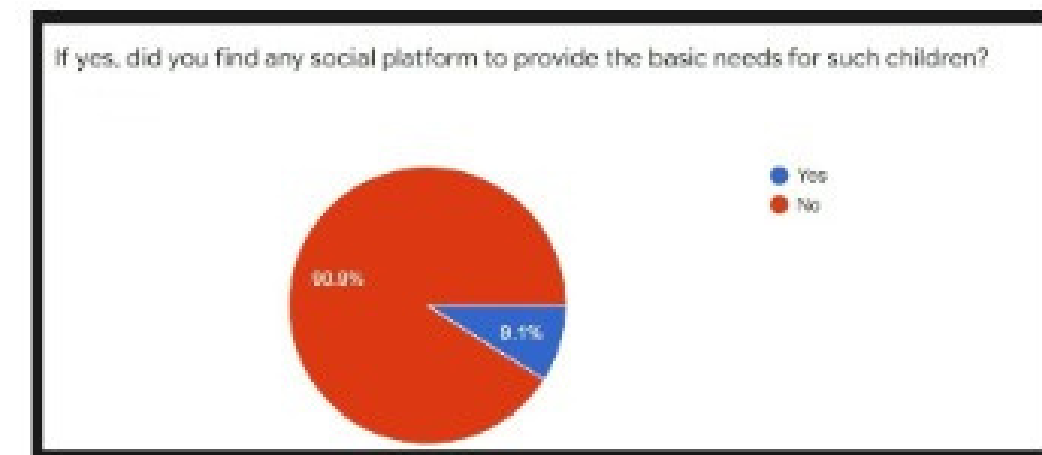

**If yes, in what form?**

**Have you seen any orphan/child with single parents, working instead of going to schools and working for surviving and felt the need to help them?**

**Did you find any social platform to provide the basic needs for such children?**

# Qualitative Analysis

Existing Schemes, governmental and non governmental are not enough

They can help to a certain extent only

NGOs procedure to give money seems more true on paper than practically

There isn't enough awareness among the children

The app should have contact number in case of emergency

Application should be Trustworthy

Increase number of languages available

Minimum amount of paperwork should be involved

The app should be mindful of not asking sensitive queries.

Application should have social media presence for greater reachability

Increase spectrum of our app to children with parents in dire need of help

Majority of children who lose their parents have to resort to small jobs

Multiple themes such as dark theme should be available

The app interface should be made simple for all to understand

The app should have separate list of people who donates visible to all

The app should have address of all nearby donating centres
